

Track4 : Foot-mounted IMU

Miguel Ortiz, Ni Zhu, Ziyu Li

 **Université
Gustave Eiffel**

IPIN 2023

THIRTEENTH INTERNATIONAL CONFERENCE ON
**INDOOR POSITIONING
AND INDOOR NAVIGATION**

25th-28th Sep. 2023, Nuremberg Germany

NUREMBERG

Overall description

- Nuremberg
- Museum of Industrial Culture
- ~1.3 km walk / ~25 min
- 95% Indoor
- 5% Outdoor (raw data GNSS)
- Active walk almost 100%
- Only 1 lift at the end
- Several breaks of few seconds (<10s)
- 3 floors : -2 -1 0
- *Quasi RealTime condition !*

Competitors

5 teams

Team Name	country	Institute
ININ624	China	School of Automation, Beijing Institute of Technology
CETC-CePNT	China	The 54th Research Institute of China Electronics Technology Group Corporation
SmartLoc	Republic of Singapore	Nanyang Technological University
VINF	China	Institute for Sensing and Navigation, Shanghai Jiao Tong University
X-lab	China	Navigation Research Center (NRC) in Nanjing University of Aeronautics and Astronautics, College of Automation

Objective of Track4 - Foot-mounted IMU

- Re-build the trajectory realized in June 2023
- With ULISS sensor mounted on foot
- Starting from a known point
- And with the help of a second given point
- 2Hz output were evaluated:
 - More than 3000 key points
 - All points for 2D component
 - All points except floor transition for Height

Sensor description

• Inputs from ULISS :

- accelerometer / gyroscope / magnetometer from a Xsens Mti-7
- GNSS rawdata and NMEA (GGA/ZDA) from a Ublox ZED-F9P dual freq. receiver
- barometer from BMP280 sensor
- temperature sensor

nav4you

Objective

From: IMU (Acc,Gyro), MAG, GNSS, BARO sensors

Compute:

Ground Truth: based on Motion Capture + GNSS-PPK + optimization

MVN Awinda starter Standard performance	
	
Range	~20m
Update rate	60hz
Battery life	6h
Comms	Radio protocol (Awinda)
Receiver	Awinda dongle
Hardware	17 wireless sensors T-shirt + straps
Charging	USB cable

MVN Awinda Intermediate performance	
	
Range	~50m
Update rate	60hz
Battery life	6h
Comms	Radio protocol (Awinda)
Receiver	Awinda station
Hardware	17(+1) wireless sensors T-shirt + straps
Charging	Charging station

Ground Truth = position of “virtual” right foot of the avatar.
ULISS sensor being mounted on the “real” right foot of Ziyou !

Evaluation / Assessment

$$\text{Accuracy Score} = \text{3rdQuartile}\{\text{SampleError}(R_i, E_i)\}$$

Where :

$$\text{SampleError}(R_i, E_i) = \text{Distance}(R_i, E_i) + (\text{penalty} \times \text{floorfail})$$

where:

- “3rdQuartile” is the third quartile error, in meters, of a cumulative error distribution function, i.e., the error value that includes 75% of estimations (sample errors) with a lower error.
- R_i is the actual position (ground truth).
- E_i is the predicted position by the method proposed by the contest participant.
- floorfail is the absolute difference between actual floor and the predicted one.
- penalty is used to penalize errors in estimating the floor. penalty is set to ~~10~~ **0 m**.
- $\text{Distance}(R_i, E_i)$ calculates the Euclidean distance between coordinates (longitude and latitude) of R_i and E_i .

The team with the lower “Accuracy Score” wins.

+3000 key points were evaluated for each Scoring Trial

Important note : no Floor penalty this year due to an issue in the Technical Annex.

Lessons learnt this year

- GNSS raw data is now used by some competitors;
it is a good opportunity to use GNSS signals in light indoor environment
- Good preparation of the use of EvaalAPI framework leads to better results !
